

MTO 15.2 Examples: Amiot, Discrete Fourier Transform and Bach's Good Temperament

(Note: audio, video, and other interactive examples are only available online)

<http://www.mtosmt.org/issues/mto.09.15.2/mto.09.15.2.amiot.php>

Figure 1. Bach's diagram on the first page of the WTC

Video 1.

The 12 major scales and their nearest heptagons

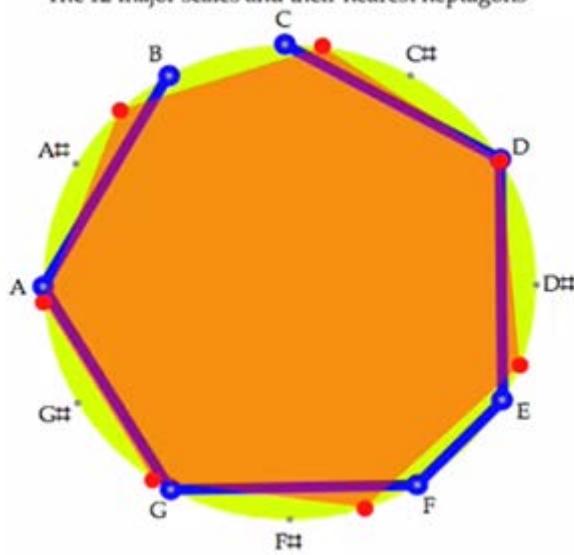

Figure 2. Major scales are best approximations of regular heptagons

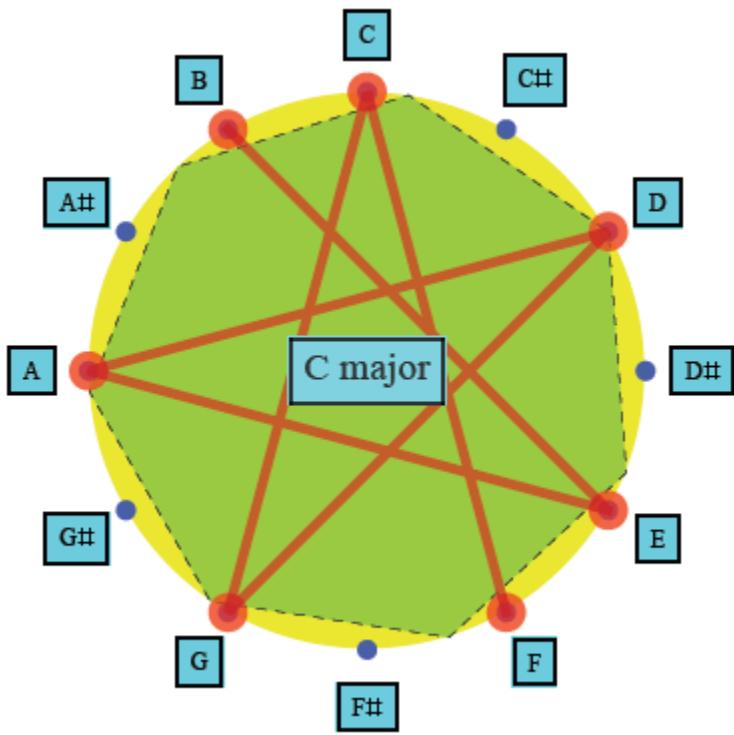

Figure 3. DFT of a major scale and a chromatic 7-note scale

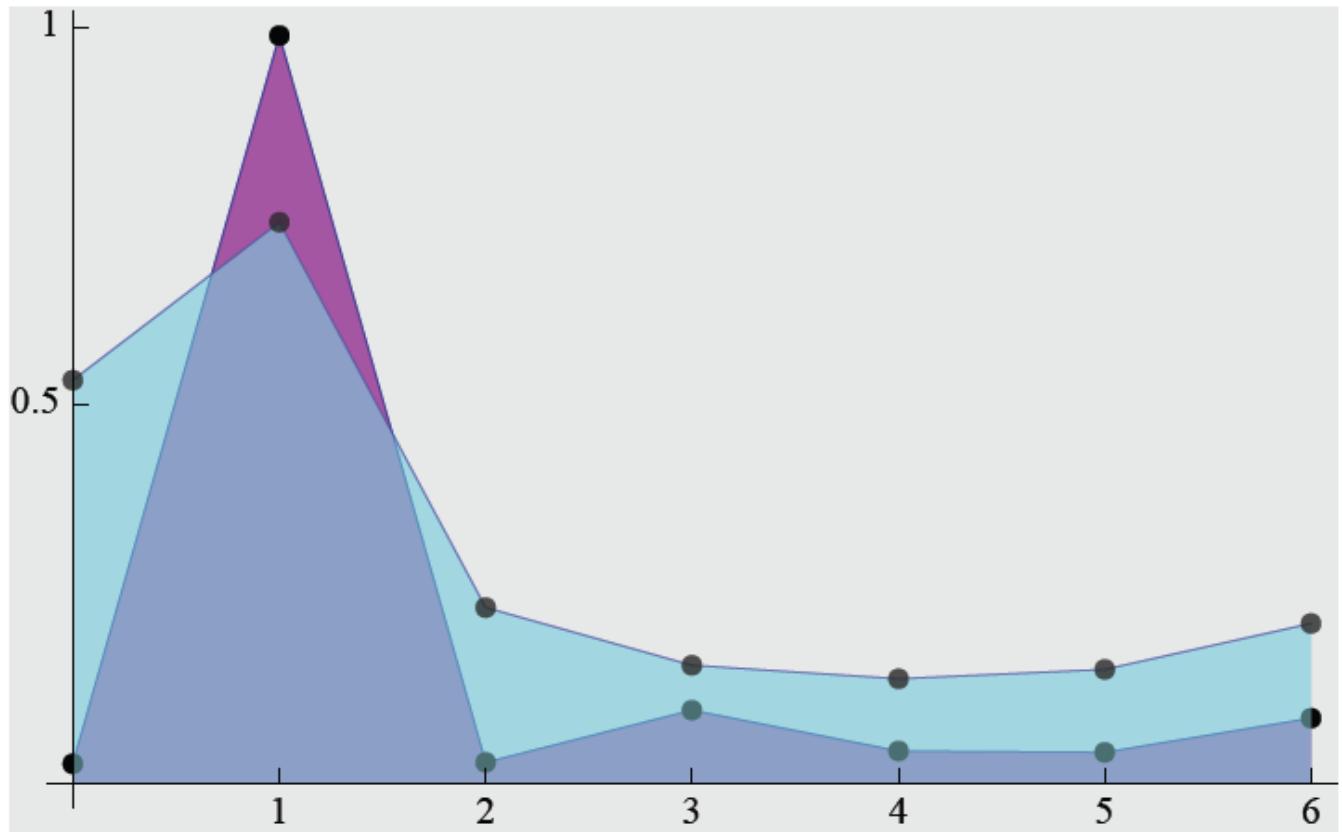

Figure 4. A program for computing MSS

```
fou1(gamme_) := Module[{n = Length[gamme]},  
  N[ $\frac{e^{2i\pi\text{gamme}} \cdot \text{Table}\left[e^{-\frac{2i\pi k}{n}}, \{k, 0, n-1\}\right]}{n}\]]]  
  
consistency(scale_) := Module[{majScales, top, bottom},  
  majScales = Table[|fou1(  
    scale[[Sort[(r + {0, 2, 4, 5, 7, 9, 11} + 1) mod 12 /. 0 → 12]]]|,  
    {r, 0, 11}];  
  top = max(majScales); bottom = min(majScales);  
  { $\frac{1}{top - bottom}$ , top, bottom}]]$ 
```

Table 1. Values of MSS for different tunings

	MSS	F	F \sharp	G	G \sharp	A	Bb	B	C	C \sharp	D	Eb	E
